

ASSIGNED TECH Web / App Dev	ASSIGNED SECTOR Retail	TARGET USER Small Businesses	STRICT CONSTRAINT Simple Interface
--------------------------------	---------------------------	---------------------------------	---------------------------------------

1. Problem Statement

Independent micro-retailers in India (local kirana shops, single-counter apparel outlets, repair stores) handle dozens of fast cash and UPI payments daily. At closing time, they face one recurring question: *"Did I actually make a profit today?"*

Existing Pain Points

- Cluttered Enterprise Tools:** Tally & Zoho are bloated, desktop-bound, and require accounting expertise.
- Chaotic Paper Registers:** Handwritten diaries get lost, spill-stained, and offer zero analytical insight.
- Delayed Loss Detection:** Owners realize cash shortfalls weeks later rather than day-of.

User Profile (Primary Persona)

Ramesh (Age 38): Operates a neighborhood grocery store. Comfortable with WhatsApp and UPI QR codes, but avoids complex computer menus. Possesses just **2 minutes** at day close to log figures.

2. Solution Overview

"One Screen. Three Numbers. Zero Confusion."

SalesSnap eliminates 100% of nested menu friction. The user opens the app, types today's total sales, enters total expenses, and taps Save to instantly reveal the day's net profit in high-contrast color coding.

3. Feature Scope & Boundaries

Feature	Functional Description	Priority
60-Second Daily Entry	Single-view input: Sales (₹), Expenses (₹), and optional freeform note.	MVP (High)
Instant Profit Calculator	Real-time evaluation: Green for Net Profit, Red for Loss. Zero manual math.	MVP (High)
Glanceable Monthly View	Grid calendar mapping daily profit/loss tags to identify trend patterns.	MVP (High)
Strict Scope Boundaries	NO inventory SKUs, NO barcode guns, NO GST ledgers, NO login forms.	Enforced Guardrail

4. Technology (Web / App Development)

Frontend Architecture

React.js & Tailwind CSS: Lightweight web SPA engineered for sub-second load times on budget mobile Android browsers. Large 48px touch targets ensure rapid thumb typing.

Client-Side Persistence

LocalStorage & IndexedDB: 100% operational offline without mandatory cloud dependencies. No cloud server needed for the MVP, eliminating hosting hurdles and operational downtime.

5. End-to-End User Flow

6. UI Wireframes & Visual Layouts

Screen 1: Daily Entry

SalesSnap

Today: 26 Sep 2026

Sales:

₹ 15,000

Expenses:

₹ 8,000

Notes: Stock restocking...

SAVE TODAY'S LOG

Screen 2: Instant Outcome

Log Saved!

NET DAILY PROFIT

+ ₹ 7,000

Margin: 46.6%

Sales: ₹ 15,000

Costs: ₹ 8,000

Month Total:

Net Profit: + ₹ 43,000

7. Expected Impact & Evaluation Metric

Impact Metric	Traditional Practice	With SalesSnap
Time Required	15–20 minutes manual tallying	< 60 seconds (3 form taps)
Cost to Business	₹8,000–₹15,000/yr (software/registers)	₹0 Free (Browser-accessible Web App)
Loss Awareness	Late discovery at month-end	Day-zero detection with red visual alerts

8. Rapid Delivery Timeline (14-Day Cycle)

Days 1–4: Core Prototyping

Build React component scaffolding, high-contrast Tailwind styling, and numeric pad layout.

Days 5–10: Data & Logic

Implement local storage persistence, date calculation logic, and calendar profit-map rendering.
